## TEST REPORT № LZF00-02193/22/Z00NZF

The report was prepared only in electronic form.

**Client:** MILA Sp. z o.o.

**Client address:** ul. Przejazdowa 6J, 42-200 Częstochowa

**Information about test item**

**Test object:** *Composite nonwovens:  
acoustic composite r-PET 1000 g/m<sup>2</sup> and acoustic  
laminate r-PET 2400 g/m<sup>2</sup>*

**Receipt date of test item:** 04-08-2022

**Nº of receipt protocol:** LZF00-02193/22/Z00NZF

**Receipt procedure:** *The receipt procedure in accordance with the Procedure  
PZ ZLB 18. Test item was sampled by the Client.*

**Information about tests**

**Test commencement date:** 05-08-2022

**Test completion date:** 08-08-2022

**Test / Method procedures:** *PN – EN ISO 354 : 2005 „Acoustics – Measurement of  
sound absorption in a reverberation room”.*

**OBJECT DESCRIPTION**

Two types of composite acoustic nonwoven fabric were presented for the test. The following information about the samples was provided by the Ordering Party:

**- sample 1/LZF00-02193/22/Z00NZF:**

acoustic composite r-PET 1000 g/m<sup>2</sup> made of PES fibers (rPET GRS Certified) with doublesided lamination (PET-CoPET). Surface mass was 1000 g/m<sup>2</sup>, thickness was 7 mm. Trade name: K-IC00-1000-B40 , K-IC10-1000-B40.

Sample dimension: 2710 x 4400 mm

**- sample 2/LZF00-02193/22/Z00NZF:**

acoustic laminate r-PET 2400 g/m<sup>2</sup> made of PES fibers (rPET GRS Certified), doublesided lamination (PET-CoPET) with PES powder (LM PET). Surface mass was 2400 g/m<sup>2</sup>, thickness was 11 mm. Trade name: L-IC05- -B40 – “Zibi”.

Sample dimension: 3060 x 3750 mm + 2075 x 1250 mm

sample 1/LZF00-02193/22/Z00NZF (photo ITB) sample 2/LZF00-02193/22/Z00NZF(foto ITB)

**TEST RESULTS**

Measured parameter	Results		
Sound absorption coefficient	$\alpha_w$	sound absorption classification	page meas.no.
acoustic composite r-PET 1000 g/m <sup>2</sup> sample nr 1/LZF00-02193/22/Z00NZF	$\alpha_w = 0,30$ (H)	D	<b>page 3</b> 501.2022 / 0505.2022
acoustic laminate r-PET 2400 g/m <sup>2</sup> sample nr 2/LZF00-02193/22/Z00NZF	$\alpha_w = 0,35$ (MH)	D	<b>page 4</b> 504.2022 / 0505.2022

*Enlarged uncertainty at a confidence level of 95% and with a coverage factor of k=2 is 0.04.*

*The result and its uncertainty apply only to the test samples. The value of the uncertainty cannot be directly attributed to the level of characteristics of the product, because the laboratory doesn't have any knowledge about the variability of its population, but only about the sample to be tested.*

*When classifying results, a simple acceptance rule will be used without taking into account the variability resulting from measurement uncertainty. (This is related to the risk of incorrect assessment resulting from not taking into account the uncertainty in the assessment. The risk also results from the fact that the laboratory has no knowledge about the variability of the product population, but only about the sample being tested).*

SAMPLE SET-UP IN THE TEST ROOM

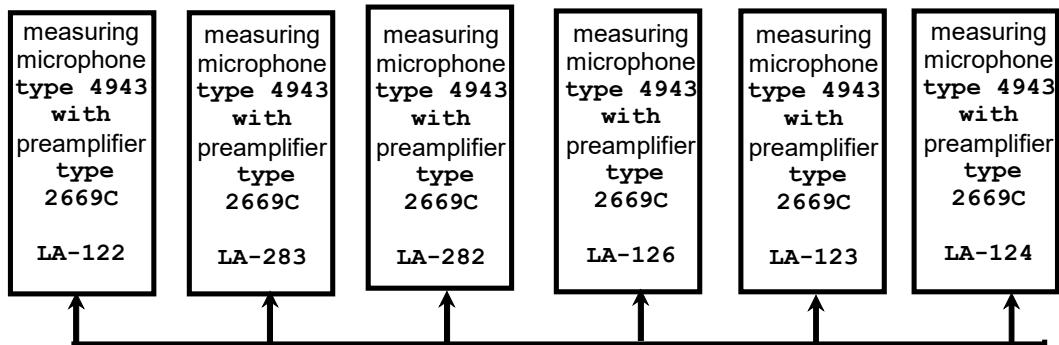

- sound source

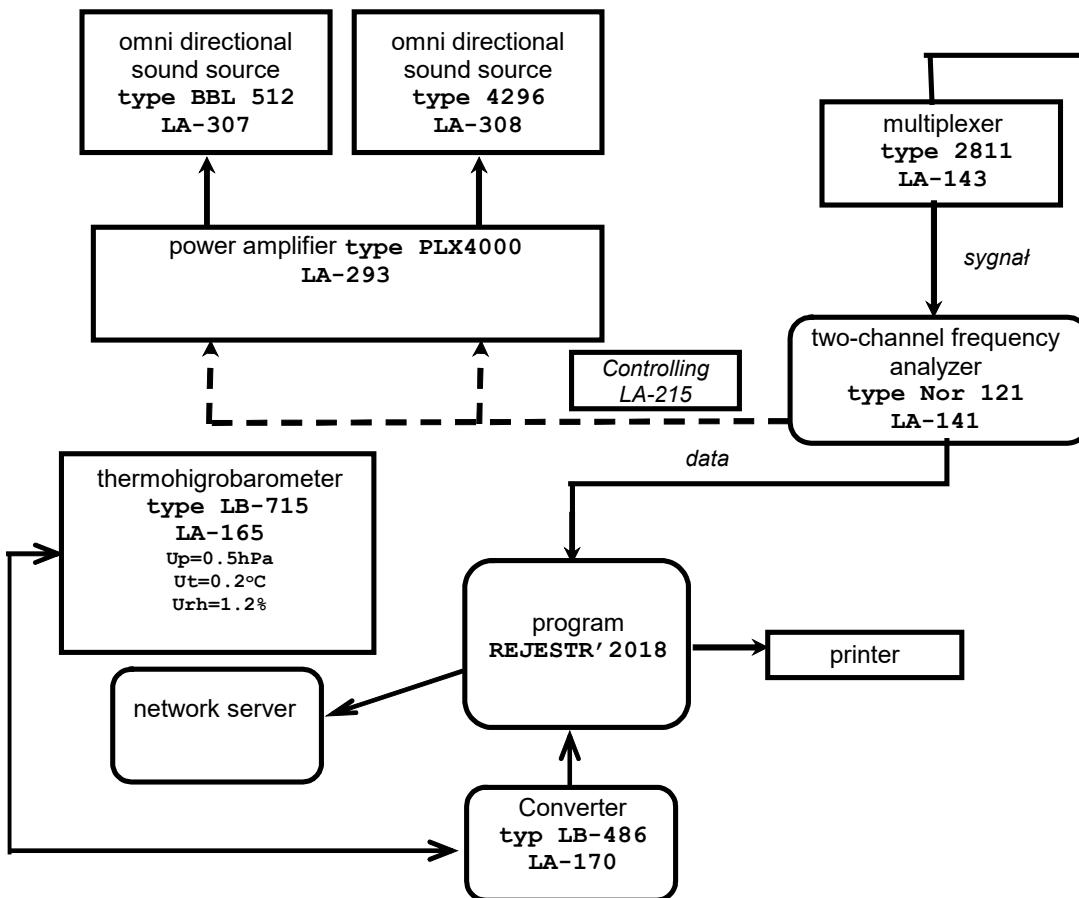

- measuring points

(dimension are given in cm)

### REVERBERATION TIME MEASUREMENT SYSTEM IN LABORATORY

#### REVERBERATION CHAMBER

**OTHER INFORMATION CONCERNING TEST**

The measurements of the sound absorption coefficient were made in a reverberation chamber with a cubature of 200 m<sup>3</sup>. The measurement field on which the test sample was placed is in the middle of the floor so that no edge is closer than 1 m from the surface of the chamber walls. The side edges of the sample were covered with sound reflecting material. Samples were laid on surface, according to mounting type A in Appendix B of PN-EN ISO 354:2005.

The indexes were calculated according to PN – EN ISO 11654:1999 „Acoustics – Sound absorbers for use in buildings – Rating of sound absorption”.
